UP11 padded sprung base

UP11

Selecta UP11 – the padded sprung base with a box spring effect

Selecta UP11 is a padded sprung base that is distinguished by its interior double spring system – the barrel pocket spring core and wooden spring slats are perfectly coordinated, and their harmonious interplay, especially when combined with a pocket spring core mattress, results in the so-called “box spring effect”. Maximum reclining comfort thanks to a mild undulating sensation. Careful craftsmanship and selected materials, such as high-quality solid beech wood, make Selecta UP11 exceptionally sturdy and durable.

For even more comfort: Selecta UP11 2-Matic

Selecta UP11 – padded sprung base

- Comfortable, padded base frame with integrated double spring system
- Top surface made of multiple glued beech spring slats with point-elastic barrel pocket spring core overlay and high-quality nonwoven fabric cover
- Slip cover made of quilted high-quality cotton/rayon ticking, removable and dry clean safe
- Very stable, dowelled and glued frame design
- Exterior rails made of high-quality solid beech wood with sanded and oiled surface (for all Matic models)
- Overall height approx. 10 cm
- Made in Germany
- **Excellent value for money**
